

NORTENE®

COVERSOL

Woven, black ground cover agrofabric

COVERSOL woven mulch fabric, which is mostly used in fruit and vegetable crops, is an effective solution for growing weed-free, beautifully growing plants.

Benefits

- It prevents weeding by preventing weeds.
- It helps to increase the heat retention capacity of the soil.
- Thanks to its woven technology, it is moderately water and air permeable.
- It practically requires no maintenance.
- The fabric is striped every 15 cm, which helps during planting.
- By retaining moisture, the fabric reduces the frequency of watering.
- Thanks to its durability, it can withstand continuous physical stress, tolerates large temperature fluctuations well, and can also withstand frost.
- The agrofabric must be fixed to the soil. We recommend our FIXSOL metal stake!

Characteristics

- Material: polypropylene
- Color: black
- Weight: 90 g/m²
- UV resistant: yes
- Recyclable: yes
- Light stripes every 15 cm
